

**ACCESSORY FOR A SUDDEN AIR DISCHARGE DEVICE AND
DISCHARGE DEVICE COMPRISING SAME**

ABSTRACT

The invention relates to an accessory that is intended to be mounted on the end of an outlet conduit (4) of an air blast device (1), this accessory being in the form of a tube mounted coaxially to the axis of the outlet conduit. It is characterized in that the cross-sectional area of this tube decreases in the direction (F) in which the air is discharged, then increases, thus forming a convergent segment (A) followed by a divergent segment (B).
